Results are the specific actions to prevent future problems

## Targeting

Breaking a market into segments & customers whose desires

## Research Project

Find Sources, Evaluate Sources, Establish a Working

# WHAT IS PANCH COIN?

PANCH COIN is a Blockchain-based decentralized platform that aims to build free, global digital content entertainment system with distributed storage technology, and allows easy and cost-effective sharing of digital content.

At present, almost all of the digital media are hosted by the middleman. For example, you need to use App Store to download an app. These companies provide a platform for creators to share their work with consumers but a free from creator or consumer.

PANCH COIN removes the need for middleman by providing a medium for creators to directly share their content with the consumers. All of the data is cryptographically secured via Blockchain while allowing creators to take entire profits.

It will also protect privacy as the content will always remain with the creators. This will limit the money big companies like Facebook, Google makes by selling your data.
